Passenger Version

Fly-Shooting Version

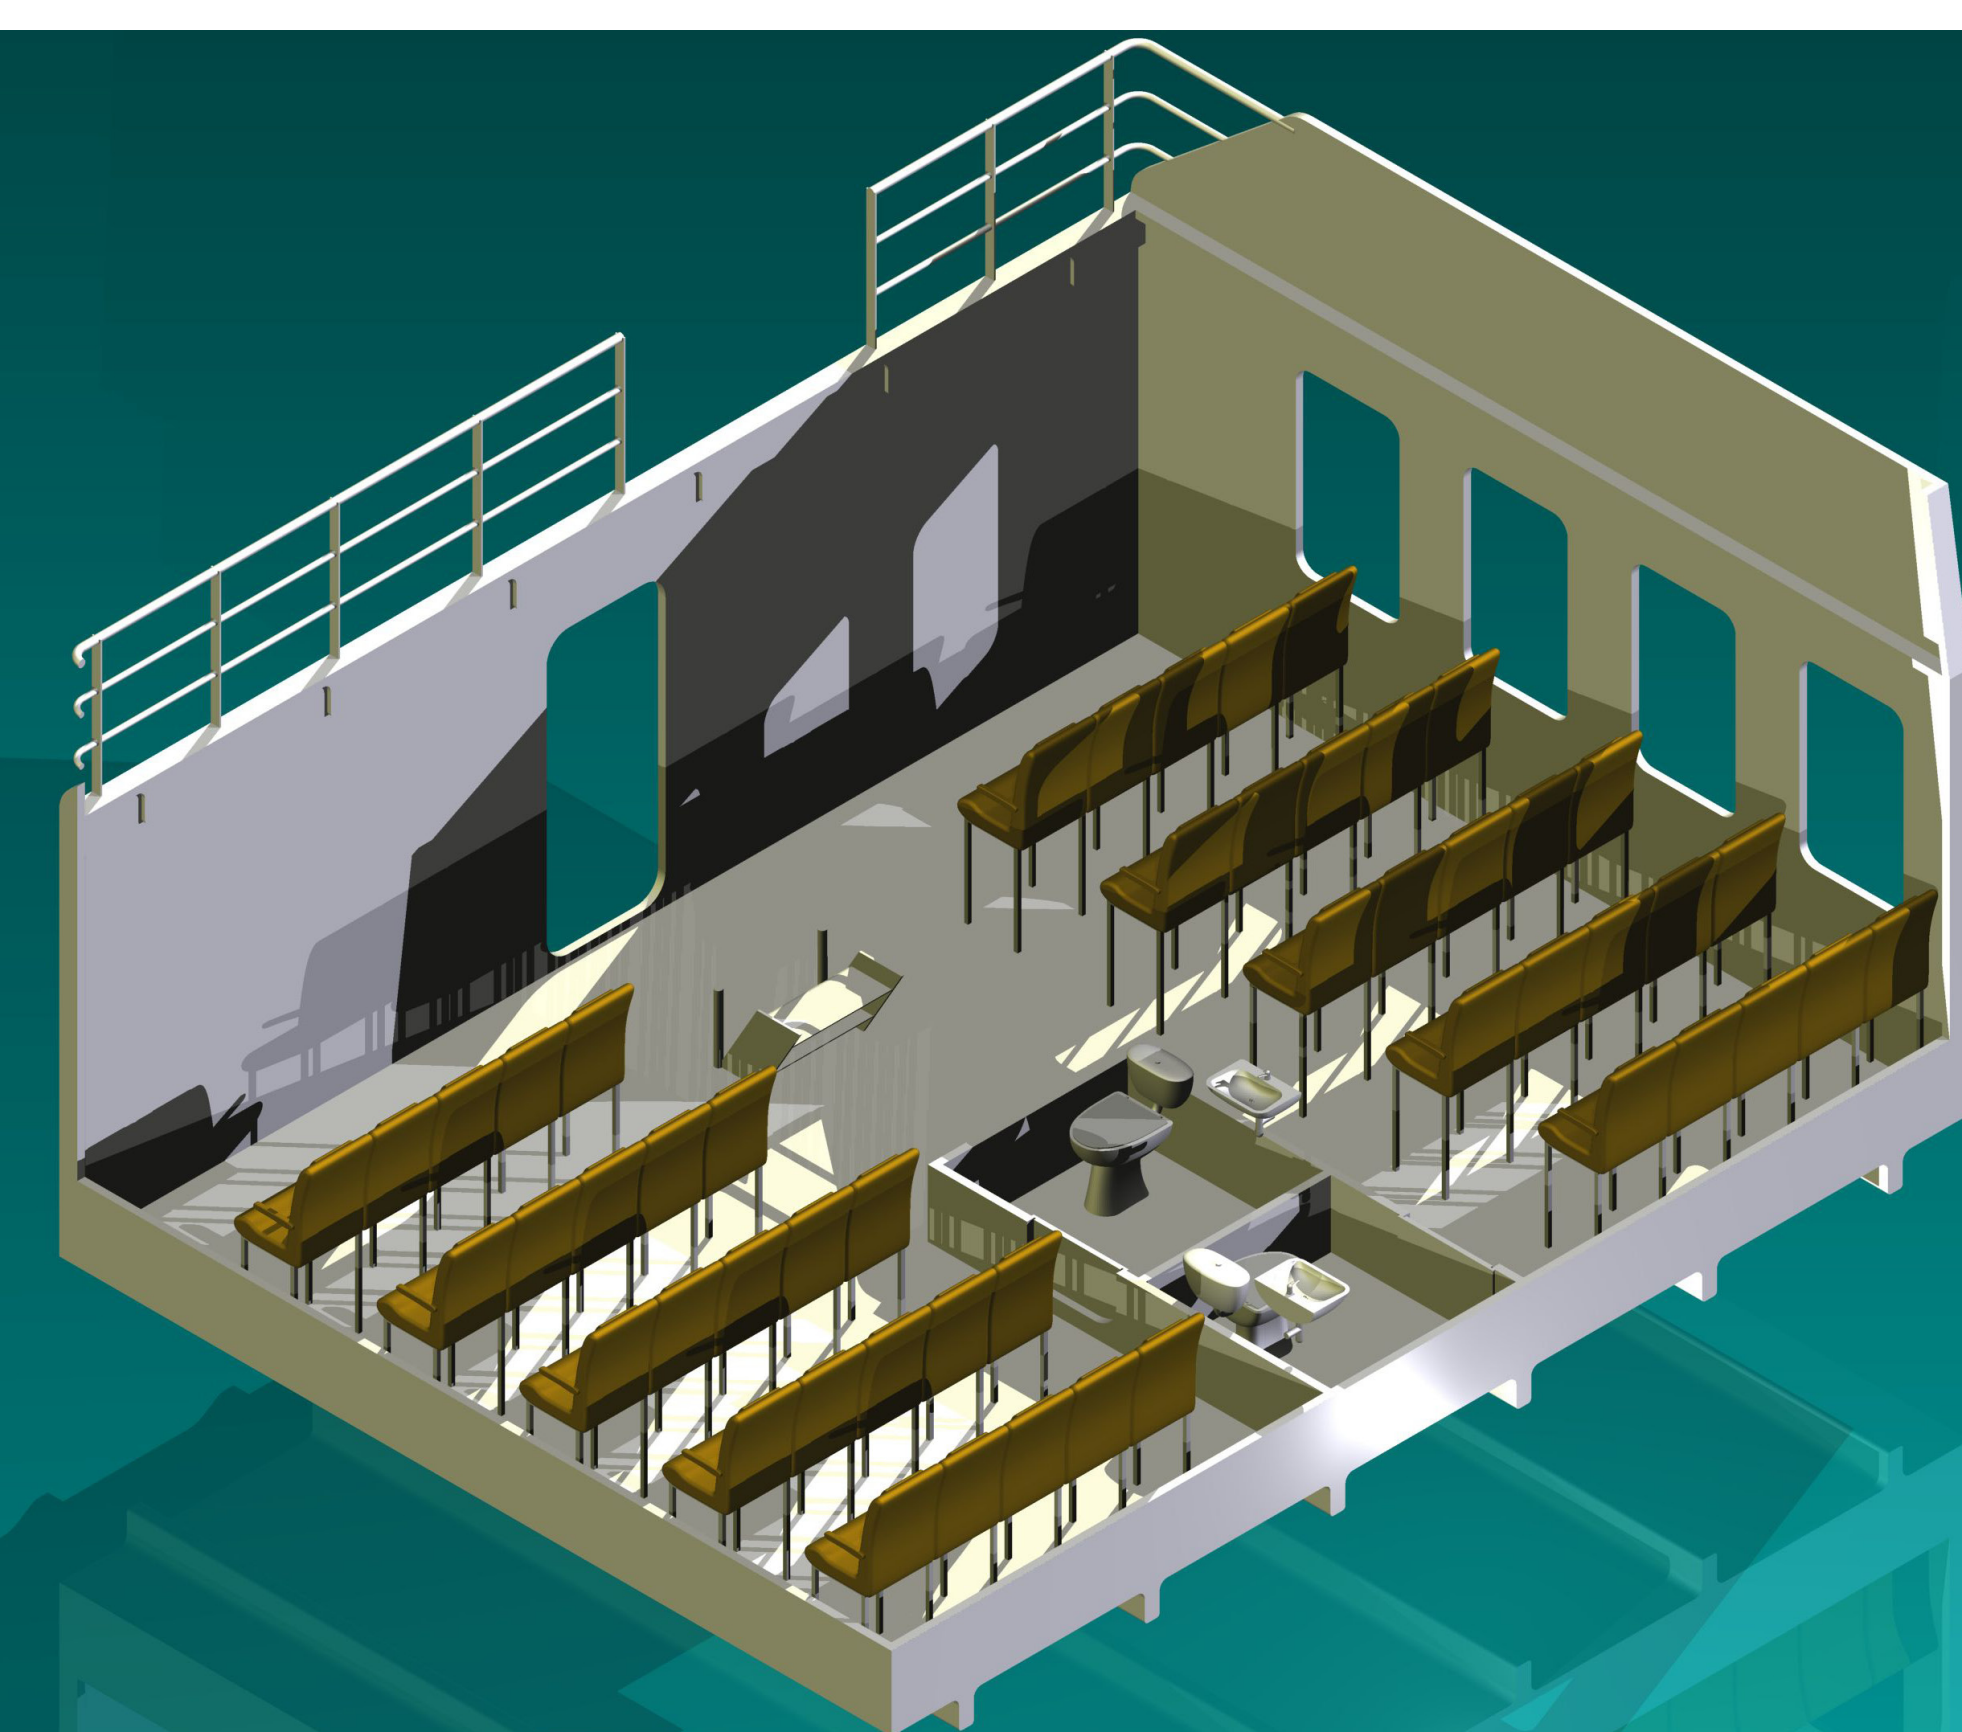

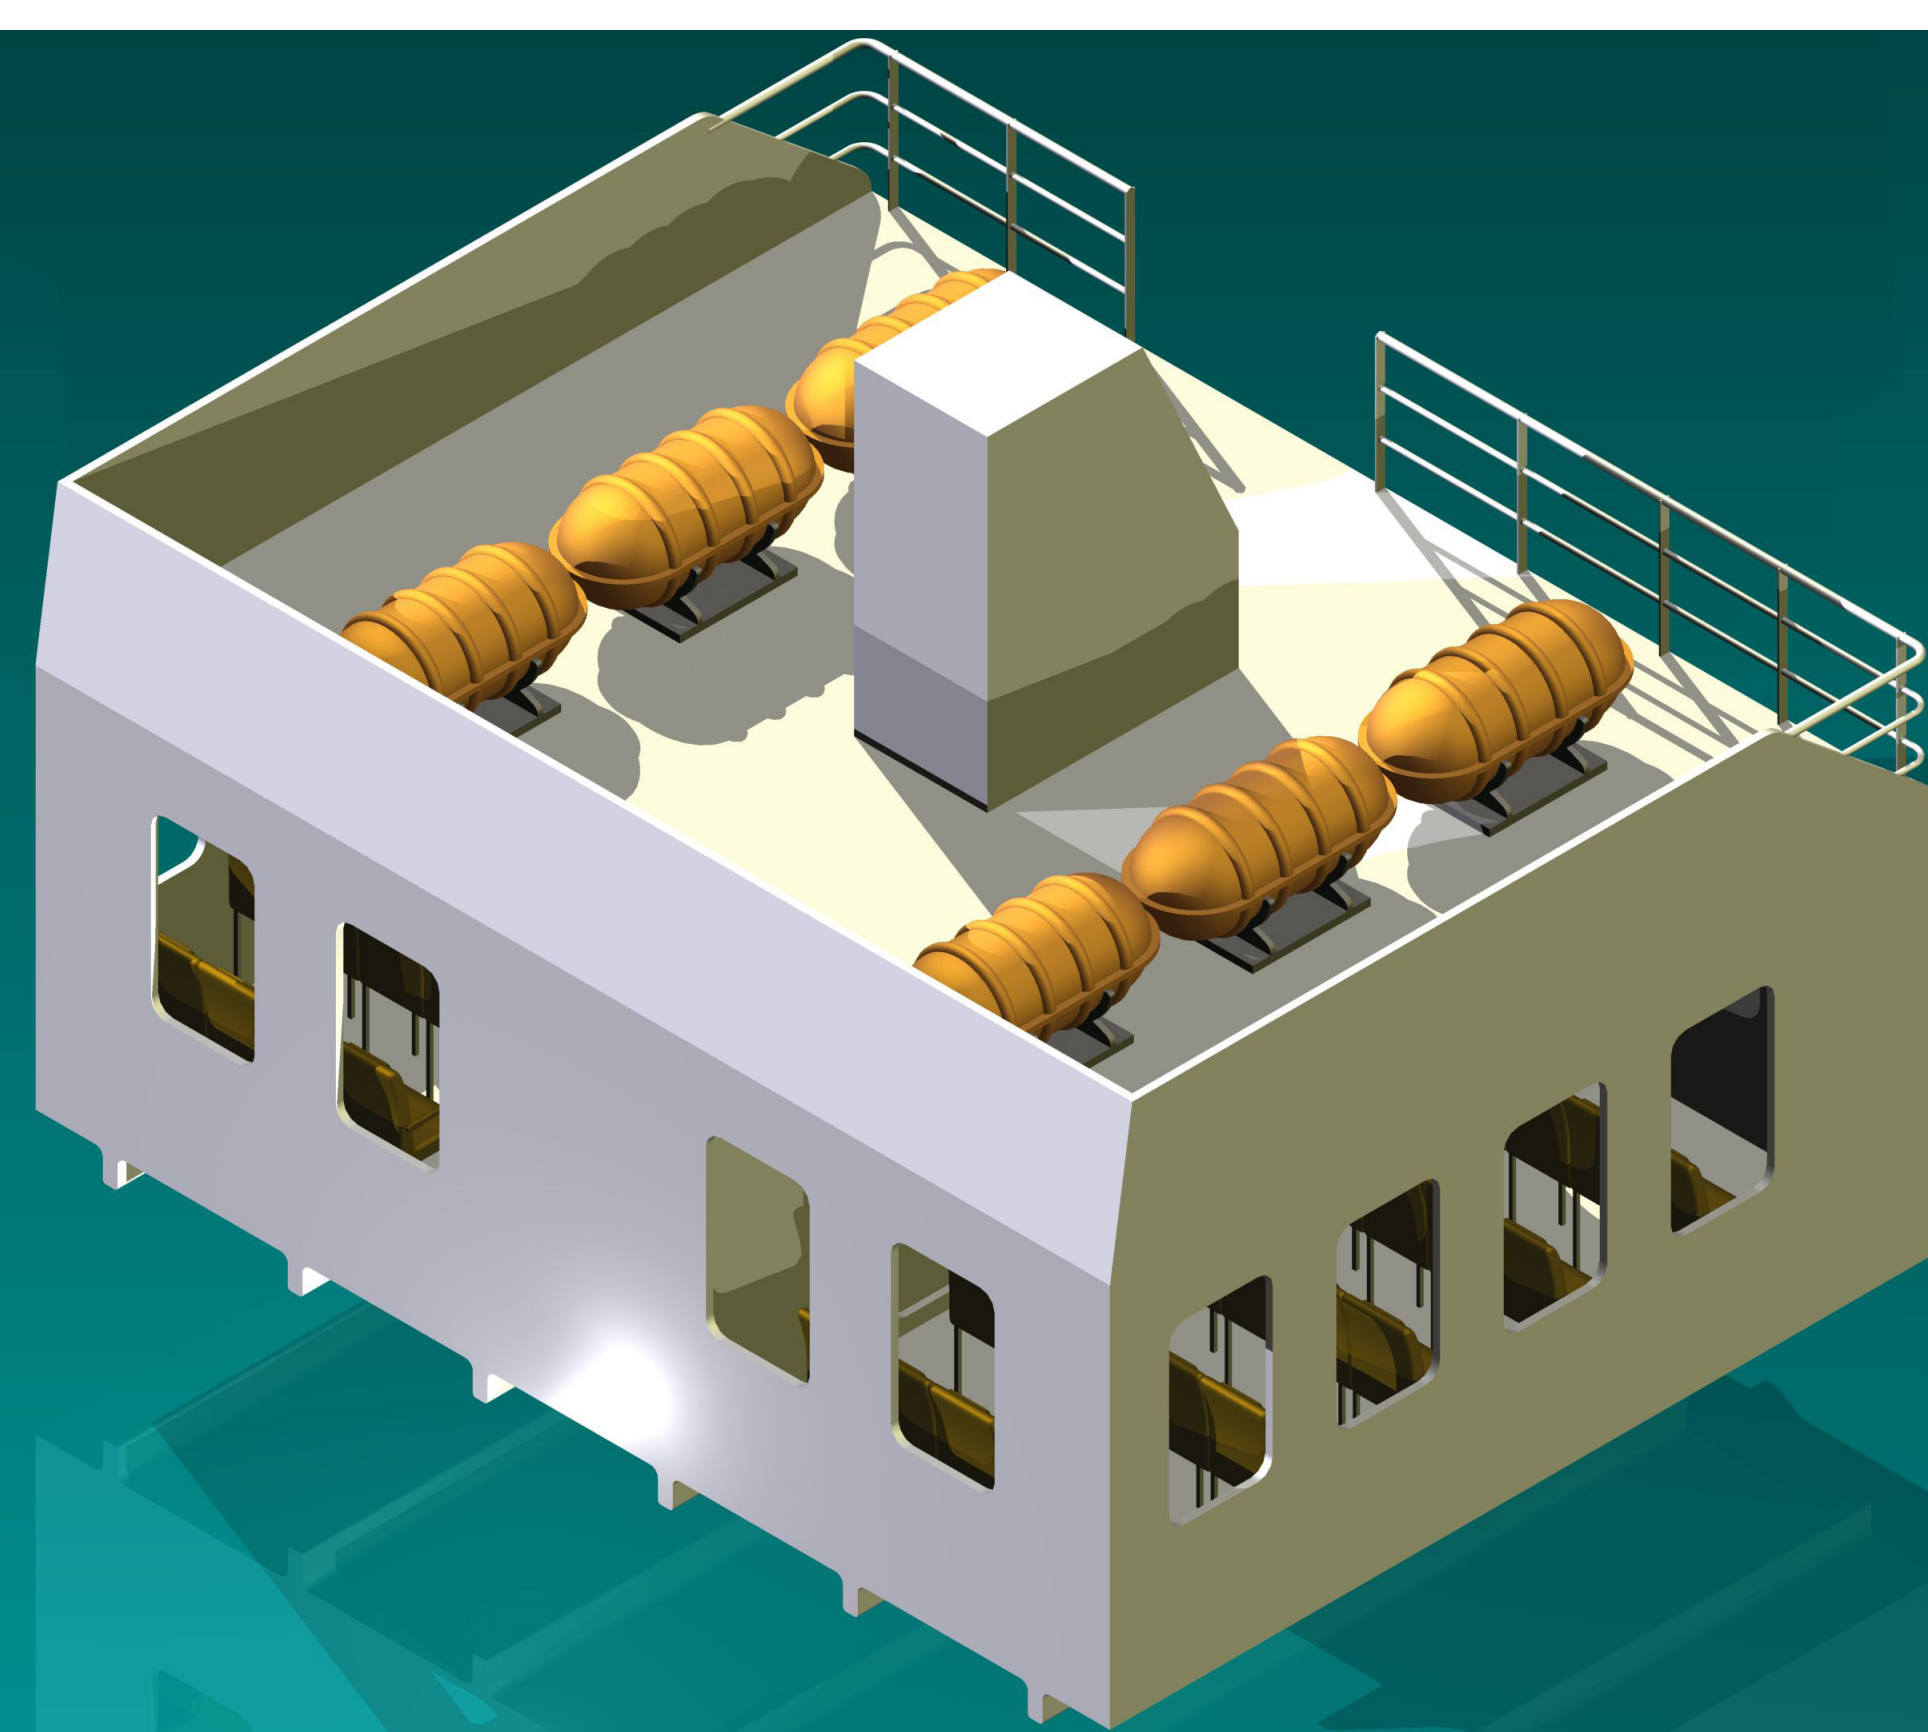

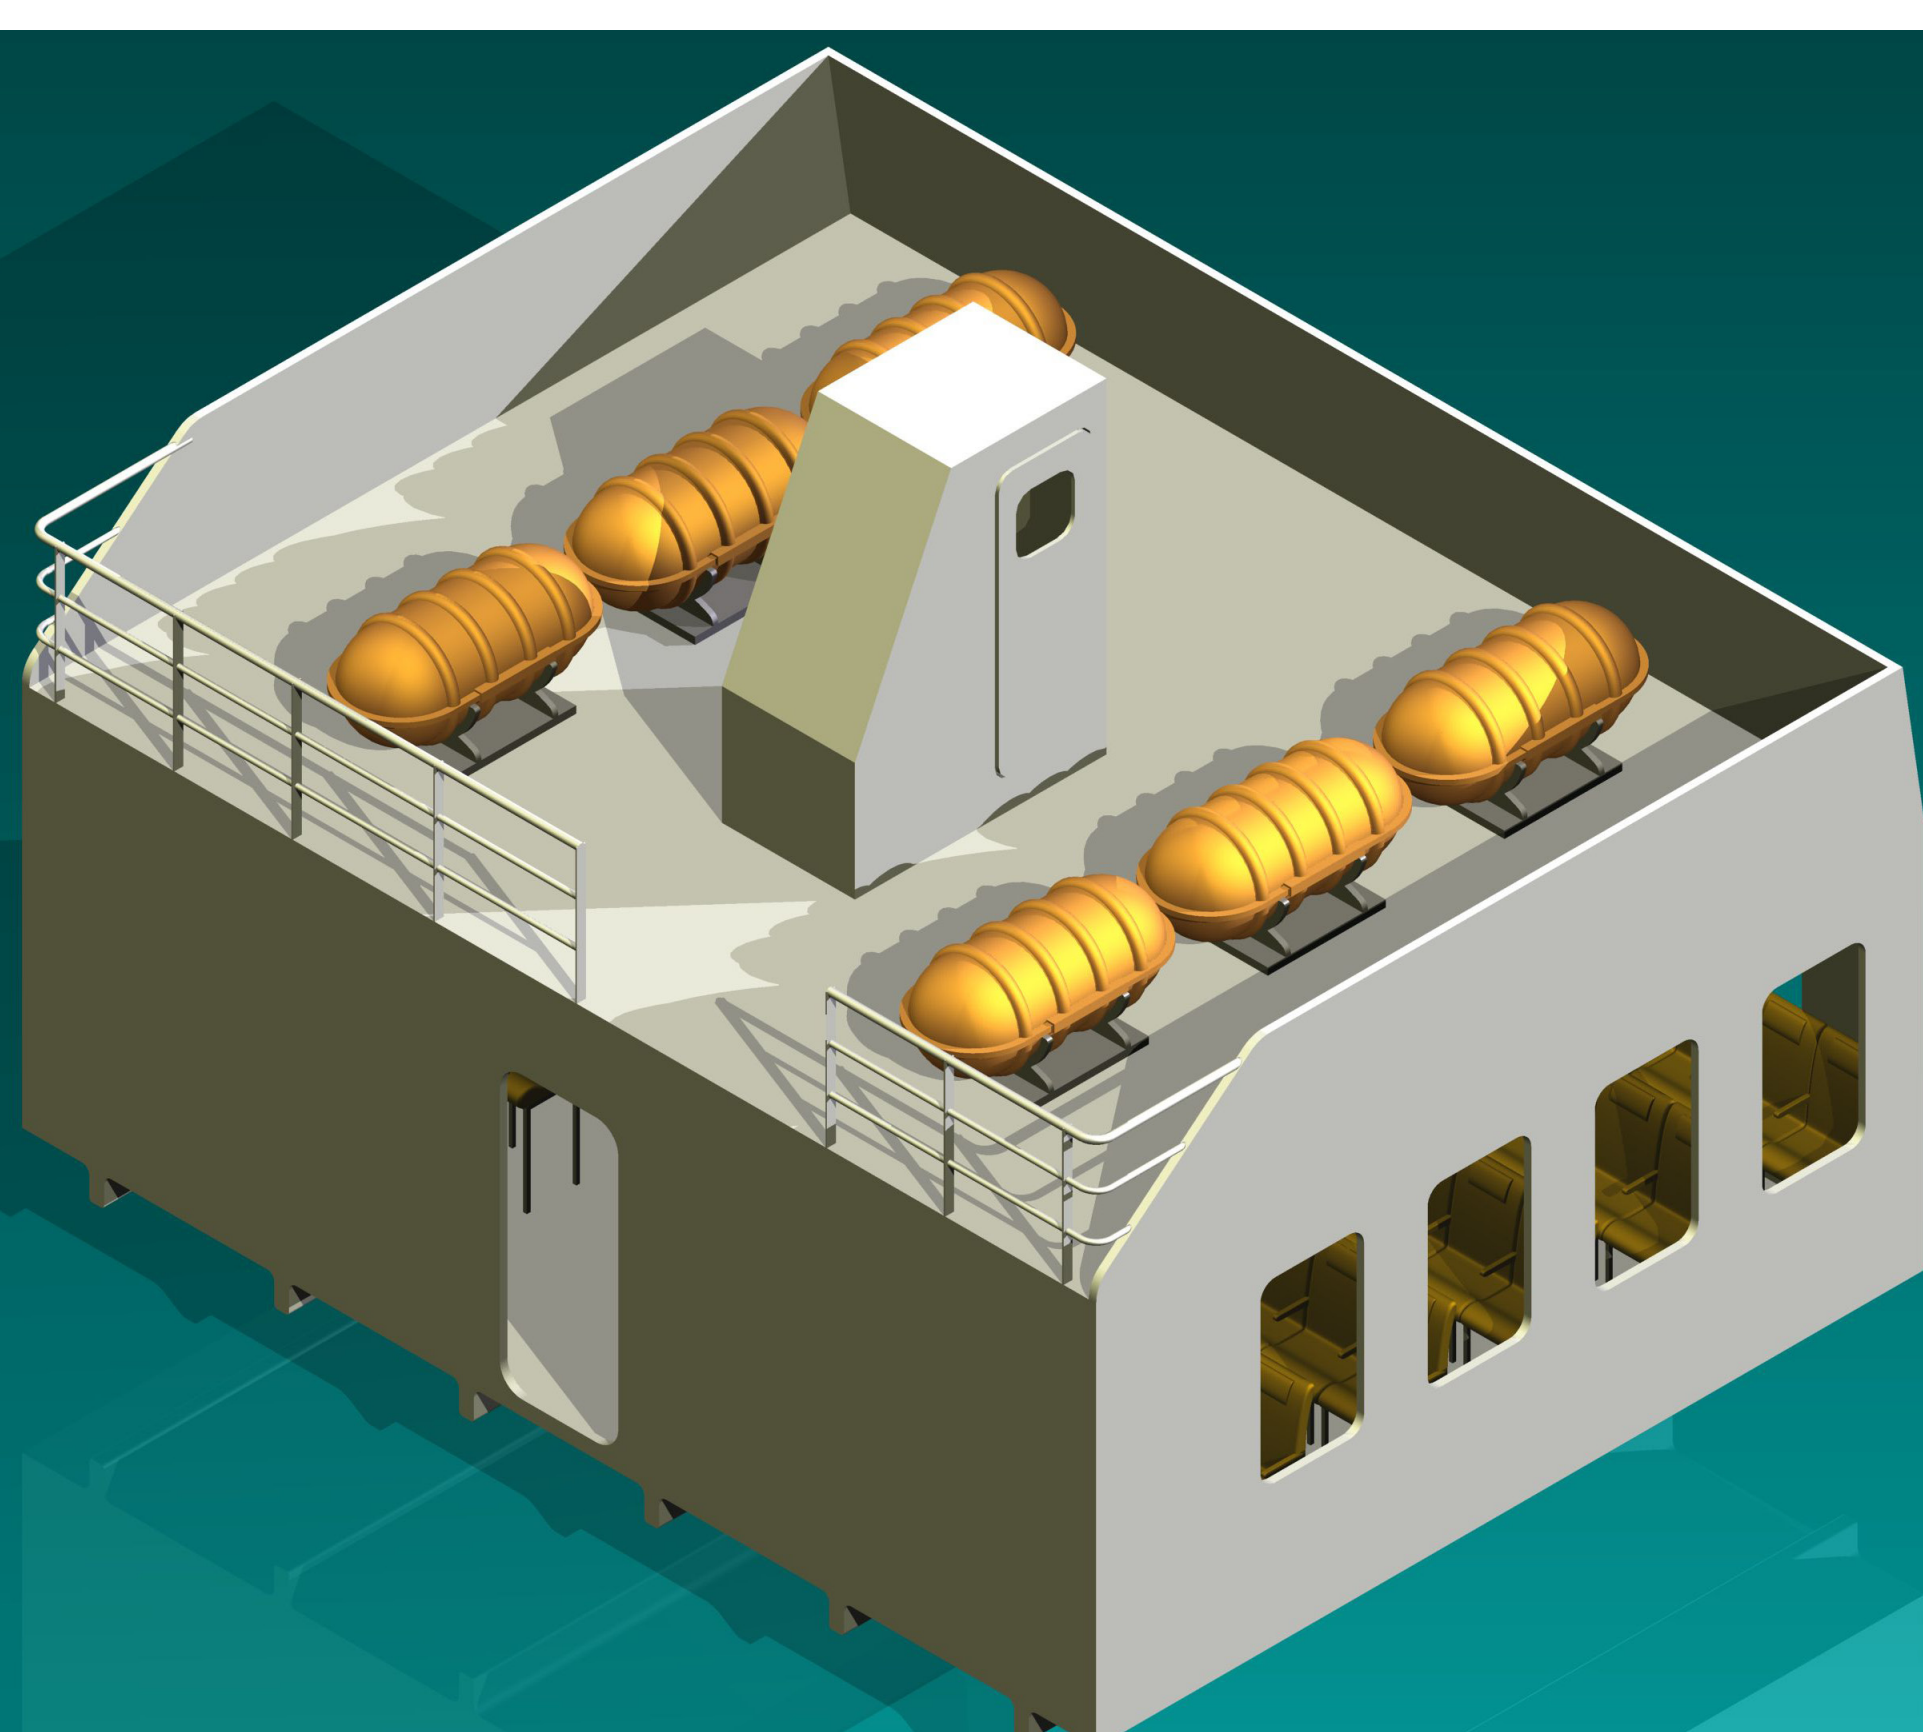

Fly-Shooting Version

A multipurpose vessel that can be used for fishing, research or as a passenger vessel. This innovative vessel, designed by Skipasyn has an interchangeable aft deck section which makes it easily adaptable for whichever purpose it's supposed to serve.

The vessel is made from composites which makes it considerably lighter than the conventional ships made of steel – and therefore a lot more eco-friendly and energy efficient. The wear and tear is far less in ships made from composites and the condensation is much lower inside.

The vessel is simply a revolution a gateway to endless possibilities and adventures.
